

HAFIZA

GÖRSEL DİKKAT KOPYALAMA

1

Hafıza, bilginin beyinde kodlandığı, saklandığı ve ihtiyaç duyulduğunda geri çağrıldığı karmaşık bilişsel sistemdir. Sadece geçmişini hatırlamak değil, aynı zamanda yeni bilgileri mevcut bilgilerle ilişkilendirerek öğrenmeyi de sağlar. Özellikle "çalışma belleği", bilgiyi kısa süreli tutup işleme becerisiyle öğrenme güçlüklerinde kritik bir rol oynar.

“Çocuklar için bilim temelli bilişsel egzersizler üretiyor, Uzmanların, öğretmenlerin, ailelerin terapi araçlarını geliştirmelerine ve zamandan tasarruf etmelerine yardımcı oluyoruz.”
